

Laser Ranging Ground System

- **Progress**
 - Have received predictions from FDF for potential visual testing dates in April. Images will be supplied later.
 - Preliminary I/O chassis is in the system and the software has successfully controlled the laser fire.
 - Full time operator has been hired and has started (although not yet full-time). Second operator has been hired and will be on-board shortly. Maceo Blount (current operator of MOB-7) will train new hires on MOBLAS-7 and all 3 will train on NGSLR.
 - Rain and clouds have limited our laser ranging work.
- **Issues & Risks**
 - Potential requirement for additional funding from LRO for LRO-LR due to possible lack of funding from NASA HQ for NGSLR system in FY09.
